CSG state policy profiles on sexual health and prevention provide the latest statistics for each state and Puerto Rico on HIV/AIDS, sexually transmitted infections and teen pregnancy.

But more significantly, the profiles provide answers to the question "what can be done?" Effective state policies recommended by the Centers for Disease Control and Prevention (CDC) are highlighted. Each state's profile reviews whether policies have been implemented in line with these recommendations.

The CSG state profiles are the place for state decision makers to get up-to-date statistics and analysis of research-proven state actions to prevent HIV/AIDS, STIs and teen pregnancy.
