According to the 2014 National Youth Tobacco Survey from the Centers for Disease Control and Prevention and the U.S. Food and Drug Administration’s Center for Tobacco Products, current e-cigarette use (defined as use on at least 1 day in the past 30 days) among high school students jumped from 4.5 percent (660,000) in 2013 to 13.4 percent (2 million) in 2014. Among middle schoolers, use tripled from 2013-2014: from 1.1 percent in 2013 to 3.9 percent in 2014. Currently, at least 48 states ban the sale of e-cigarettes or alternative tobacco products to minors.
